First order for 200 MW supply contract in China for the Siemens Gamesa 4.X platform

- The company will install 42 units of the Siemens Gamesa 4.X platform, with 145 meters rotor and unit rating reaching 4.8 MW
- This is the second contract that SGRE has received from the local independent power producer Xinjiang TBEA
- Commissioning is expected before the end of 2020

Siemens Gamesa Renewable Energy (SGRE) continues to grow its business in China with the first contract to supply the Siemens Gamesa 4.X platform in the country. The company will install 42 units with unit rating reaching 4.8 MW, as well as provide operation and maintenance services for five years at a 200 MW project developed by local independent power producer Xinjiang TBEA Group.

This is the second order that SGRE has received from TBEA, strengthening the partnership between both companies. The 200 MW wind farm is located in the city of Changji, in the region of Xinjiang, northwest China. The Siemens Gamesa 4.X platform, with its 145 metres rotor variant, is a good fit for the project site conditions featuring medium wind, sandy and dusty weather, and low temperatures during winter time. Commissioning is expected before the end of 2020.

“We’re delighted to see our first project landing in Xinjiang and strengthen our partnership with TBEA to support its expansion in the renewable energy sector. Following a previous Siemens Gamesa 3.X platform order with TBEA earlier this year, this new order reflects the customer’s trust in Siemens Gamesa products, technology and our capability of undertaking complex logistics and project execution” stated Richard Paul Luijendijk, CEO of SGRE Onshore APAC.

SGRE’s presence in China dates back to over 30 years. The company is committed to growing its manufacturing and supplier base in China and providing best-in-class turbines and services to meet customer expectations in the country and other global markets. In addition to China, SGRE’s footprint in Asia Pacific extends to Vietnam, Japan, South Korea, Indonesia, the Philippines, Thailand, Australia and New Zealand, where it has already installed more than 7.9 GW. The company has also developed strongly in offshore wind in the region following the signing of contracts for close to 2 GW of offshore wind power projects for the years to come, including 1.5 GW of confirmed orders.

About Siemens Gamesa Renewable Energy

Siemens Gamesa is a global leader in the wind power industry, with a strong presence in offshore, onshore and services. Through its advanced digital capabilities, the company offers one of the broadest product portfolios in the industry as well as industry-leading service solutions,

helping to make clean energy more affordable and reliable. With over 95 GW installed worldwide, Siemens Gamesa manufactures, installs and maintains wind turbines, both onshore and offshore. Its backlog stands at €25.1 billion. The company is headquartered in Spain and listed on the Spanish stock exchange (included in the Ibex-35 index).
